Choosing Your Hive Fleet: Color Schemes and Concepts

Before you even think about picking up a brush, the most crucial decision is what color scheme you're going for. The Tyranids are incredibly versatile, and their bio-organic nature means you can explore a vast spectrum of colors. Games Workshop offers a wealth of inspiration, from the classic Leviathan to more esoteric hive fleets. But don't feel limited by official lore; the beauty of miniature painting is creative freedom!

Popular Tyranid Color Schemes

Let's look at some widely loved approaches that serve as excellent

starting points:

1. **Leviathan:** The iconic purple and green scheme is a fan favorite for a reason. It offers strong contrast and looks incredibly menacing.
2. **Kraken:** Think deep blues and vibrant reds. This scheme evokes a sense of oceanic dread and is perfect for a swift, predatory force.
3. **Jormungandr:** For those who love their beasts earthy and subterranean, Jormungandr's sandy browns, ochres, and earthy greens are a fantastic choice.
4. **Behemoth:** Bold reds and dark greys scream aggression. Behemoth is all about brute force and an overwhelming assault.
5. **Custom Hive Fleets:** This is where things get exciting! Consider:
    1. **Neon and Vibrant:** Think electric blues, toxic greens, and fiery oranges. Perfect for a bio-luminescent, venomous swarm.
    2. **Monochromatic with Accent:** A base of greys or blacks with a striking accent color for claws, mouths, or eyes can be incredibly effective and stylish.
    3. **Subtle and Earthy:** Greens, browns, and muted tones can create a more naturalistic, camouflaged predator.

The Importance of Contrast and Theme

When choosing your scheme, think about contrast. You want your Tyranids to be readable on the tabletop. Bright colors on dark carapaces, or vice versa, will make them pop. Also, consider the narrative you want to tell. Is your swarm a stealthy hunter? A lumbering behemoth? A rapidly reproducing plague? Your color choices can subtly communicate this.

Essential Tools and Materials for Your Tyranid Army

To effectively paint your Tyranid invasion swarms, you'll need a few key supplies. Don't worry, you don't need a professional studio to get fantastic results. Here’s a breakdown of what will make your life easier:

The Basics: Brushes and Paints

1. **Brushes:** A good selection of synthetic or sable brushes is essential. You'll want:
    1. A medium-sized brush (e.g., size 1-2) for general coverage and base coats.
    2. A smaller detail brush (e.g., size 0-1) for finer details like eyes, teeth, and symbols.
    3. An old, sturdy brush for drybrushing.
2. **Paints:** Games Workshop's Citadel range offers a vast palette perfect for Tyranids. Essential colors include:
    1. **Primers:** Black, White, or a Grey. Black is great for shadows, white for vibrancy, and grey offers a balance.
    2. **Base Colors:** Your primary carapace color, secondary chitin color, and flesh/belly tones.
    3. **Washes:** Nuln Oil, Agrax Earthshade, and Reikland Fleshshade are workhorses for adding depth and definition.
    4. **Layering/Highlighting Colors:** Lighter shades of your base colors for edge highlighting.
    5. **Specialty Paints:** Technical paints like 'Ardcoat for slimy effects, or Contrast paints for rapid base coating.

Beyond the Brush: Ancillary Supplies

1. **Palette:** A wet palette is highly recommended. It keeps your paints moist for longer, allowing for smoother blending and preventing waste.
2. **Water Pot:** Two pots are ideal: one for initial rinsing and one for cleaner water for thinning paints.
3. **Paper Towels/Cloth:** For drying brushes and cleaning up mistakes.
4. **Hobby Knife and Clippers:** For assembling and cleaning up mould lines.
5. **Glue:** Plastic glue for plastic kits, and Super Glue (or Citadel Plastic Glue for some specific applications) for resin or metal parts.
6. **Hobby Handle (Optional but Recommended):** For holding miniatures steady while painting, preventing greasy fingerprints.

The Foundation: Priming and Base Coating Your Swarm

This is where your Tyranid army starts to take shape. A good primer and careful base coating are the bedrock of a great-looking miniature.

Priming: Setting the Stage

Priming provides a surface for your paint to adhere to. The color of your primer will influence your subsequent colors.

1. **Black Primer:** Excellent for creating dark, brooding effects and a strong foundation for washes. It's very forgiving and great for beginners as it naturally creates shadows.
2. **White Primer:** Makes colors pop and appear brighter, ideal for

vibrant, almost neon schemes. However, it can be less forgiving with mistakes.
3. **Grey Primer:** A good middle ground, offering decent coverage and allowing colors to be vibrant without being overly bright.

Ensure your primer is applied in thin, even coats. Multiple thin coats are always better than one thick, gloopy coat that obscures detail. Shake your spray can vigorously and paint in short, sweeping motions from about 8-12 inches away.

Base Coating: Laying Down the Primary Colors

This is where you apply your main colors to the different areas of the Tyranid – the carapace, the skin/belly, the claws, and any other prominent features. Remember to thin your paints!

1. **Thinning Paints:** Citadel paints are quite thick. Always add a little water (or medium) to your paint on the palette. Aim for a consistency like melted ice cream. This allows for smooth, opaque coverage without obscuring detail.
2. **Multiple Thin Coats:** Don't try to get full coverage in one go. Apply one thin coat, let it dry, and then apply another. This builds up color smoothly and preserves the sculpted detail.
3. **Work from Inside Out:** A good rule of thumb is to paint the innermost parts of the model first, then work outwards. For Tyranids, this might mean painting the belly/skin before the carapace.

Tip for Swarms: When painting multiple identical models, try to batch paint. Do the carapace on all of them, then the belly, then the claws, etc. This speeds up the process significantly and helps

maintain consistency.

Adding Depth and Definition: Washes and Layering

With your base colors down, it's time to add that crucial dimension that makes your Tyranids look like they've crawled from a nightmare.

The Magic of Washes

Washes are thinned, fluid paints that flow into the recesses of the model, defining details and creating natural-looking shading. They are a Tyranid painter's best friend.

1. **How to Apply:** Load your brush with wash and apply it liberally over the area you want to shade. Don't be afraid to let it pool in the recesses.
2. **Common Washes for Tyranids:**
    1. **Nuln Oil:** A black wash that's excellent for darkening armor and creating grime.
    2. **Agrax Earthshade:** A brown wash that adds a natural, earthy feel, perfect for organic skin or muddy effects.
    3. **Reikland Fleshshade:** A reddish-brown wash, great for fleshy areas and adding warmth.
3. **Controlling Washes:** If a wash pools too much on a flat surface, you can wick away the excess with a damp brush before it dries.

Layering and Highlighting: Bringing Out

the Details

Washes provide shade, but highlights bring your model to life by simulating where light would hit it. Layering is the process of applying progressively lighter colors to these raised areas.

1. **Finding the Light Source:** Imagine where the light is coming from (usually from above) and apply your lighter colors to the edges and raised surfaces that would catch that light.
2. **Edge Highlighting:** Use your smaller brush to carefully paint a thin line of your highlight color along the edges of the carapace, armour plates, and other prominent features. This creates sharp definition.
3. **Layering:** For a smoother transition, you can apply a layer of your base color with a little white or a lighter shade mixed in to the areas where the wash was applied, leaving the deepest recesses dark. Then, apply a pure highlight color to the sharpest edges.

The "Chunky" Highlight: For Tyranids, a slightly thicker, more pronounced highlight can work well with their often-sharp, angular armour. Don't be afraid to go for bolder highlights.

Advanced Techniques for Truly Terrifying Tyranids

Once you've mastered the basics, you can start to experiment with techniques that will make your Tyranid invasion swarms truly spectacular.

Drybrushing: Quick and Effective Detail

Drybrushing is a fantastic technique for quickly highlighting textured surfaces and making details pop, especially on large swarms of models.

1. **How it Works:** Load an old, dry brush with a small amount of paint (a lighter shade of your base color). Wipe almost all of the paint off onto a paper towel until very little comes off when you brush. Then, rapidly brush back and forth over the textured areas of the model. The tiny amount of paint will catch on the raised details.
2. **Perfect for Tyranids:** This is ideal for the textured skin, chitinous plates, and bony growths common on Tyranids.
3. **Progression:** You can drybrush with progressively lighter colors to build up even more intense highlights.

Oils and Glazes: For a Professional Finish

While more advanced, using oil paints or glazes can offer incredible depth and smooth transitions.

1. **Oil Washes:** Oil paints are very forgiving and can be used to create subtle shading and weathering effects. They require mineral spirits to thin and clean, and take longer to dry, but the blending potential is phenomenal.
2. **Glazes:** Thinning your paints down to an almost transparent level with a glaze medium allows you to subtly shift colors, build up smooth transitions, and create vibrant effects, especially for bioluminescence or sickly skin.

Special Effects: Blood, Slime, and Bioluminescence

These finishing touches can elevate your Tyranid army from good to unforgettable.

1. **Blood Effects:** Use technical paints like Blood for the Blood God or a simple red ink mixed with gloss varnish for gruesome gore. Apply it to claws, mouths, and wherever your 'Nids have been feeding.
2. **Slime/Gloss Effects:** A coat of 'Ardcoat or a dedicated gloss varnish applied to specific areas (like the mouth, eyes, or dripping from weapons) can simulate a wet, slimy, or venomous look.
3. **Bioluminescence:** This is where vibrant greens, blues, or purples really shine. Layer these colors thinly and build them up on fleshy parts, eyes, or sensory organs. Using a bright white dot as the final highlight on eyes can make them glow. Contrast paints can also be excellent for quick, vibrant bioluminescent effects.

Painting Specific Tyranid Units

While general techniques apply to all Tyranids, some units have unique features that warrant special attention.

The Warrior Synapse Creatures (Warrior, Carnifex, Hive Tyrant)

These larger models are excellent canvases for showcasing your painting skills. Their larger surface areas allow for more detailed work, smoother blends, and bolder highlighting. Don't shy away from experimenting with contrasting colors on different plates of their

armour.

The Swarming Hordes (Hormagaunts, Termagants, Ripper Swarms)

These are the backbone of your invasion force. For these, efficiency is key. Batch painting, drybrushing, and liberal use of washes are your best friends. The goal is to make them look cohesive and menacing without spending hours on each individual creature. Consider a simpler, more striking color scheme for these units to make painting them faster.

Specialist Tyranids (Genestealers, Lictors, Pyrovores)

These models often have unique sculpts and features. Genestealers, with their scythe-like claws and exposed musculature, are perfect for vibrant, contrasting colors. Lictors benefit from camouflage patterns or unnerving, muted tones. Pyrovores and other bio-cannons offer opportunities for fiery or toxic effects.

Bringing It All Together: Basing Your Swarm

A well-painted miniature deserves a fitting base. The base is the final touch that grounds your army and adds to the overall narrative.

Common Tyranid Base Themes

1. **Alien Worlds:** Rocky, volcanic, or crystalline terrain is a classic choice for Tyranids.
2. **Shattered Worlds:** Ruins, debris, and shattered technology evoke the devastation your swarm leaves in its wake.
3. **Organic/Fungal:** Think mutated growths, slimy puddles, and alien flora for a truly horrific, bio-organic look.

Basing Techniques

1. **Texture Paints:** Citadel Texture paints (like Agrellan Earth, Stirland Mud, or Martian Ironearth) are incredibly easy to use. Apply them to the base, let them dry, and then drybrush and wash them for instant terrain.
2. **Adding Elements:** Glue on small rocks, static grass, tufts of foliage, or even small sculpted pieces of terrain to enhance the base.
3. **Painting the Base Rim:** Always paint the rim of the base. Black, brown, or a matching color to your army can provide a clean, finished look.

Why Paint Your Tyranids? The Strategic

and Aesthetic Advantage

Beyond the sheer satisfaction of bringing a miniature to life, a well-painted Tyranid army offers significant advantages on the tabletop. A cohesive color scheme makes your swarm instantly recognizable and visually imposing, conveying the sheer scale of their arrival. Furthermore, the act of painting itself is a crucial part of the Warhammer 40,000 hobby, fostering creativity and a deeper connection to your army. This guide aims to demystify the process, making it accessible to both seasoned hobbyists and newcomers alike, ensuring your **Games Workshop Tyranid models** stand out.

Crafting Your Hive Fleet: Choosing a Tyranid Color Scheme

The first, and arguably most crucial, step in painting your Tyranid invasion swarms is selecting a compelling color scheme. Tyranids are known for their diverse and often unsettling bio-forms, and their color palettes should reflect this. Consider the environment from which your Hive Fleet originates, or the specific traits you wish to emphasize. Will your swarm be the venomous green of a jungle world, the stark bone of a desert planet, or the eerie, bioluminescent blues and purples of the deepest void?

Classic and Iconic Tyranid Schemes

Many players opt for established and popular Tyranid color schemes, and for good reason. The classic Leviathan scheme, with its bone carapaces and red, fleshy underbellies, remains a powerful visual. Gorgon, with its black chitin and vibrant, contrasting accents, is another fan favorite. These schemes are well-documented and offer a

solid foundation for your own artistic interpretation. Experimenting with different washes and highlights on these classic palettes can yield unique results.

Developing Your Own Unique Hive Fleet

Don't be afraid to forge your own path! Consider contrasting colors to make your Tyranids pop. For instance, a dark, muted carapace can be brought to life with brightly colored flesh, or vice-versa. Think about the psychological impact of color: vibrant, neon colors can evoke a sense of alien toxicity, while muted earth tones might suggest a more insidious, camouflaged threat. Online communities and Games Workshop's own inspiration galleries are excellent resources for brainstorming new and exciting **Tyranid painting ideas**.

The Role of Contrast and Complementary Colors

When selecting your color palette, consider the interplay of contrast and complementary colors. Using colors that are opposite each other on the color wheel (e.g., blue and orange, purple and yellow) can create a visually dynamic and striking effect. This is particularly effective for highlighting specific bio-forms or weapon systems within your swarm, drawing the eye to key features of your **Tyranid invasion swarms**.

Mastering the Base: Enhancing Your Tyranid Miniatures

A well-painted miniature is elevated by an equally impressive base. The base serves as the diorama for your creature, providing context and adding depth to your army. For Tyranids, the basing options are

virtually limitless, mirroring their adaptive nature.

Xenos Worlds and Alien Landscapes

Embrace the alien! Consider creating bases that represent the worlds your Tyranids are devouring. This could involve jagged, crystalline formations, oozing, toxic swamps, or desolate, volcanic plains. Using textured paints, sculpted elements, and flocking can quickly transform a plain base into an immersive environment. Remember to ensure your base colors and textures complement your Tyranid's color scheme.

Simple Yet Effective Basing Techniques

For those who prefer a quicker approach, simple yet effective basing can still make a huge impact. Applying a layer of Agrellan Earth or Stirland Mud, followed by a drybrush of a lighter color, can create a realistic dirt or rock effect. Adding a wash of a contrasting color can then bring out the detail. Don't forget small details like static grass or tufts to add a touch of life, even to the most desolate alien worlds.

Incorporating Tyranid Elements into Your Bases

Take your basing to the next level by incorporating elements that tell a story. Perhaps a shattered Ork vehicle, the bleached bones of fallen Imperial Guardsmen, or even a discarded Tyranid spore pod. These subtle additions not only enhance the visual appeal but also add narrative flavor to your **Warhammer 40k Tyranid invasion**.

Painting Techniques for Tyranid Carapaces

and Flesh

The Tyranid model range offers a wealth of opportunities for applying diverse painting techniques. The interplay between chitinous carapace and fleshy underbelly is a defining characteristic of these aliens, and mastering their painting is key to a successful swarm.

Layering and Highlighting Carapaces

For a striking carapace, layering is your friend. Start with a base coat, then apply progressively lighter shades of the same color to highlight raised areas and edges. Washes can be used to add depth and shadow in the recesses. Don't be afraid to experiment with complementary colors for edge highlights to make those carapaces truly pop. For a glossy, alien look, consider applying a layer of 'Ard Coat over your finished carapace.

The Art of the Flesh Wash

The fleshy parts of your Tyranids – the bellies, limbs, and exposed membranes – offer a chance to create a visceral and unsettling appearance. Washes are invaluable here. A dark wash like Nuln Oil or Agrax Earthshade can quickly add shadow and definition. For a more vibrant or diseased look, consider using a contrasting wash, such as a purple or green wash over a red base coat. The key is to ensure the flesh tones feel alien and organic.

Drybrushing for Speed and Texture

Drybrushing is an incredibly efficient technique for highlighting the textured surfaces of Tyranid models, especially their carapaces and scaly hides. Load your brush with a lighter shade of your base color,

wipe most of it off on a paper towel, and then lightly brush over the raised areas. This quickly picks out the detail and adds a sense of battle-worn wear and tear, perfect for a swarm that has traversed countless worlds.

Weathering and Battle Damage: The True Face of Invasion

A truly fearsome Tyranid invasion swarm isn't pristine. It's a force that has fought, bled, and consumed its way across the galaxy. Incorporating weathering and battle damage will bring your **Games Workshop Tyranid** models to life and tell a story of constant warfare.

Chipping and Scratches

Simulate chips and scratches on your carapaces using a fine brush and a dark brown or black paint. Apply small dabs and streaks to areas that would naturally experience wear and tear, such as edges, joints, and prominent ridges. For a more advanced effect, use a sponge to create a realistic chipped paint look. This technique is particularly effective for bringing out the texture of the carapace.

Oozing Bio-Acid and Slime Effects

Many Tyranid creatures are known for their corrosive secretions. Recreate these effects using specialized technical paints like Nurgle's Rot or Blood for the Blood God. Apply these to weapon mouths, wounds, or dripping from their mandibles. A thin glaze of a contrasting color over these effects can add a wet, slimy sheen.

Dust and Grime Accumulation

Depending on the basing scheme, you can simulate dust and grime accumulating on your models. Pigment powders are excellent for this. Apply them with a dry brush or a soft brush to areas that would naturally collect dirt, such as the underside of the model, joints, and recessed areas. Seal these with a matte varnish to prevent them from rubbing off.

Advanced Techniques for the Dedicated Hive Master

For those looking to push their Tyranid painting to the next level, several advanced techniques can elevate your swarm to true battlefield dominance.

Airbrushing for Smooth Transitions and Large Areas

An airbrush can revolutionize the way you paint large Tyranid models like Carnifexes or Hive Tyrants. It allows for incredibly smooth gradients and flawless base coats, especially for vibrant or gradient-heavy color schemes. Mastering an airbrush for zenithal highlighting can provide a perfect undercoat for subsequent brushwork.

Object Source Lighting (OSL)

Implementing Object Source Lighting (OSL) can make your Tyranids look truly alien and menacing. This involves painting as if a specific light source (e.g., a bioluminescent organ, a weapon’s energy glow) is illuminating the model. The areas facing the light source are painted brighter, with colors reflecting from the source onto surrounding areas. This is a challenging but incredibly rewarding technique for

adding a dynamic, otherworldly feel to your **Tyranid invasion swarms**.

Freehand and Detail Work

Don't underestimate the power of freehand painting. Adding intricate patterns to carapaces, tribal markings to flesh, or custom symbols to weapons can make your Tyranids truly unique. This requires a steady hand and practice, but the results can be spectacular, setting your **Games Workshop Tyranid** models apart.

Tools and Products to Enhance Your Tyranid Painting Experience

Games Workshop offers a vast array of paints, brushes, and tools specifically designed for miniature painting. Investing in quality supplies will significantly improve your painting experience and the final result.

Essential Games Workshop Paints for Tyranids

A good selection of Citadel paints is crucial. Essential colors for Tyranids often include:

1. **Base Coats:** Mephiston Red, Macragge Blue, Death Guard Green, Rhinox Hide, Zandri Dust.
2. **Layering and Highlighting:** Evil Sunz Scarlet, Calgar Blue, Ogryn Camo, Ushabti Bone, Screaming Skull.
3. **Washes:** Nuln Oil, Agrax Earthshade, Biel-Tan Green, Drakenhof Nightshade, Carroburg Crimson.
4. **Technical Paints:** Nurgle's Rot, Blood for the Blood God, 'Ard Coat.

Don't forget primers (Chaos Black, Macragge Blue, Wraithbone) to ensure your paint adheres well.

Brushes and Tools for Precision and Efficiency

A good set of brushes is non-negotiable. Sizes 0, 1, and 2 are versatile for most tasks. For drybrushing, synthetic brushes with stiffer bristles are ideal. Beyond brushes, consider investing in a Citadel painting handle to make holding your miniatures easier, and a palette (wet or dry) to keep your paints fresh. Tweezers and clippers are also essential for assembling and preparing your models.

Conclusion: Building a Menacing Tyranid Invasion Swarm

Painting your **invasion swarms of Tyranids** is a rewarding journey that allows for immense creative expression. By carefully selecting your color scheme, mastering essential painting techniques, and embracing weathering and battle damage, you can create a truly terrifying and visually stunning army that will dominate any tabletop. Remember to experiment, have fun, and let your imagination run wild. The galaxy trembles at the approach of your painted swarm!
