Understanding the Core Concepts of Corporate Finance

Corporate finance deals with how businesses raise and manage their capital. This encompasses a wide range of topics, including: • Capital Budgeting: *Evaluating long-term investments (e.g., new equipment, plant expansion). This involves techniques like Net Present Value (NPV), Internal Rate of Return (IRR), and Payback Period.* • Example: A company considering a new factory needs to evaluate the profitability and risk of the investment. Capital budgeting helps determine if the potential returns outweigh the costs and risks involved. • NPV Calculation: **NPV = Σ [CF_t / $(1 + r)^t$] - Initial Investment. Where CF_t is the cash flow in period t, r is the discount rate, and t is the time period.** • Capital *Determining the optimal mix of debt and equity financing to fund operations. This involves understanding the cost of capital, and the impact of leverage.* • Example: **A company deciding whether to issue more debt or sell more stock must weigh the benefits (lower cost of debt) against the risks (higher financial distress).** • Working Capital Management: **Managing short-term assets and liabilities to ensure smooth day-to-day operations. This involves managing inventory, accounts receivable, and accounts payable.** • Example: A company might use cash flow forecasting and inventory control techniques to maintain optimal levels of cash and inventory.
