Bypassing allows you to exclude specific zones from being armed. * **How to Bypass:** 1. Press the **FUNCTION/FUNC** button. 2. Enter your **User Code**. 3. Use the arrow keys to navigate to the "BYPASS" or "ZONE BYPASS" option. 4. Press **ENTER/OK**. 5. You'll be prompted to enter the zone number(s) you wish to bypass. You'll need to re-bypass them each time you arm the system if they are still in use.

4. Checking System Status

The LED indicators and the keypad display are your windows into the system's health. * **READY Light:** If this is on, all zones are closed and the system can be armed. If it's off, at least one zone is open or in fault. * **ARMED Light:** Indicates the system is armed. * **ALARM Light:** Illuminates during an

alarm event. It may also indicate a system fault or trouble condition. * **Display:** Often shows specific zone numbers that are open or in fault, system event logs, and other diagnostic information.

- Check Wiring:** If you're comfortable, visually inspect the wiring between the keypad and the main panel. Loose connections can cause this.
- Reboot the System:** Sometimes, a simple power cycle of the main alarm panel can resolve temporary glitches. Turn off the AC power and disconnect the battery, wait a minute, then reconnect.

2. "OPEN" or "FAULT" Message on Display

- Identify the Zone:** The display should indicate which zone is reporting an issue.
- Check Doors/Windows:** Ensure all doors and windows that are part of that zone are fully closed and latched.
- Inspect Sensors:** Look for any visible damage to the sensors or their wiring in

that zone. * **Bypass the Zone (Temporary Solution):** If you need to arm the system immediately and can't resolve the issue, bypass the faulty zone as described above. However, this should be a temporary measure.

3. False Alarms

* **User Error:** Ensure all users are familiar with arming/disarming procedures and entry/exit delays. * **Sensor Issues:** Faulty or improperly installed motion detectors, door/window contacts, or glass break sensors can cause false alarms. Check for environmental factors like pets, drafts, or insects that might be triggering sensors. * **Low Battery:** Low battery in a wireless sensor or even the main panel can sometimes lead to erratic behavior.

4. Incorrect User Codes

* **Double-Check Entry:** Ensure you are entering the correct user code precisely as programmed. * **Incorrect Code Reset:** If you suspect a code has been forgotten or compromised, you'll likely need an administrator or installer to reset it through the programming menu.
