Questions & Answers About simple maths quiz questions and answers

No	Question	Answer
1	What's the quickest way to mentally calculate 15% of a number? For example, 15% of 200?	To quickly find 15% of a number, first find 10% by moving the decimal one place to the left (so 10% of 200 is 20). Then, find 5% by halving that 10% (so 5% of 200 is 10). Finally, add them together: 20 + 10 = 30. So, 15% of 200 is 30.
2	I always forget the order of operations! What's a simple trick to remember PEMDAS (or BODMAS)?	PEMDAS (Parentheses, Exponents, Multiplication and Division (from left to right), Addition and Subtraction (from left to right)) is a lifesaver! A fun way to remember it is: 'Please Excuse My Dear Aunt Sally'. Just keep that sentence in mind to recall the correct order for solving equations.

3	What's a common pitfall when dividing by fractions, and how can I avoid it?	The most common mistake is trying to divide the numerators and denominators directly. The trick is to 'keep, change, flip': keep the first fraction the same, change the division sign to multiplication, and flip the second fraction upside down (find its reciprocal). Then, simply multiply the fractions as usual.
4	How can I easily estimate if a large number is divisible by 3 or 9 without doing long division?	The rule for divisibility by 3 and 9 is simple: add up all the digits in the number. If the sum of the digits is divisible by 3, then the original number is divisible by 3. If the sum of the digits is divisible by 9, then the original number is divisible by 9. For example, 345: 3+4+5 = 12. 12 is divisible by 3, so 345 is divisible by 3. 12 is not divisible by 9, so 345 is not.
5	What's the fastest way to square a two-digit number ending in 5? For example, 35 squared?	To square a two-digit number ending in 5, like 35, follow this pattern: First, take the tens digit (which is 3) and multiply it by the next whole number (which is 4). So, 3 * 4 = 12. Then, append '25' to the end of that result. So, 1225. Therefore, 35 squared is 1225.
