Wearable Technology on the Horizon

While not yet mainstream in the way we understand them today, wearable technology was definitely a hot topic in late 2014. The first iterations of smartwatches were beginning to appear, promising to bring notifications and basic functionality to your wrist. Fitness trackers were also

becoming more popular, encouraging a more health-conscious approach to technology. PCWorld likely offered early reviews and speculative pieces on the future of wearables and their integration into our daily lives.

The Cloud Continues to Grow

Cloud computing was steadily transforming how we store data and access software. Services like Google Drive, Dropbox, and Microsoft OneDrive were becoming standard tools for many, offering convenient access to files from any device. The professional IT world was grappling with the implications of cloud adoption for businesses, focusing on security, scalability, and cost-effectiveness. We were also seeing the early stages of esports gaining mainstream recognition.

The Internet of Things (IoT) Taking Shape
