How to delete songs from iphone

How to Delete Songs from Your iPhone: A Comprehensive Guide

** Your iPhone's music library is a treasure trove of memories, but sometimes, you need to declutter and delete unwanted tracks. Whether you're downsizing your storage, tidying up after a playlist purge, or simply want to make room for new music, understanding how to delete songs from your iPhone is essential. This comprehensive guide walks you through various methods, from simple single-song deletions to batch removals and managing your music library across different platforms.

Understanding Your iPhone's Music Storage

Before diving into deletion techniques, it's crucial to understand where your music resides on your iPhone. Music purchased from the iTunes Store or Apple Music is typically stored in iCloud or locally on your device. Downloaded songs or music added from other sources may also be stored locally. This distinction is important because the method of deletion varies depending on the source. Music purchased through Apple Music or the iTunes Store is often tied to your Apple ID and is more likely to be stored in iCloud, while locally downloaded files are directly on your device's

storage.

Deleting Songs from Your iPhone's Music App

The most straightforward method for deleting individual songs or albums is through the built-in Music app: • Locate the song: Open the Music app and navigate to the artist or album containing the track you wish to delete. • Select the song: Tap on the song's title to bring up its details. • Delete the song: *Tap the "Delete" button (usually represented by a trash can icon). Confirm the deletion when prompted. For deleting multiple songs, you can select them by holding down on each song's title and tapping "Select All" or manually selecting the desired tracks. Then, choose "Delete".*

Deleting Songs from iCloud Music Library

If your music is stored in iCloud, deleting songs from your device might not immediately remove them from your library. This is because the iCloud Music Library syncs songs across all your Apple devices. • Deleting a song in iCloud: *Deleting a song from one device in the library will likely remove it from all devices.*

Deleting Downloaded Music Files

If you've downloaded music outside of Apple Music, such as MP3s from a website, these files are directly stored on your iPhone's local storage. • Deleting downloaded music: **Use the "Files" app (or similar file manager) to locate the desired music files and then delete them.** • Important consideration: **Deleting local files from the Files app won't affect your other devices.**

Benefits of Deleting Songs (and Related Considerations)

• Free up storage space: Essential for iPhones with limited storage capacity. • Tidying your music library: *Creating a more manageable music collection.* • Reduced iCloud storage costs (if applicable): Deleting songs from iCloud Music Library frees up cloud storage.

Managing Your Music Library Across Devices

Keeping your music library consistent across multiple Apple devices requires understanding how iCloud Music Library works. • iCloud Music Library syncing: *Tracks added or removed on one device will usually sync with all other devices connected to the same Apple ID.* • Offline downloads: To avoid potential issues, it is recommended to download songs or albums to your iPhone in advance if you anticipate limited network connectivity, ensuring these remain available.

Advanced Deletion Strategies

• Bulk deletion: **Select multiple songs for simultaneous removal.** • Deleting entire albums: Optionally delete the entire album. • Using a file manager (for specific local files): Helpful for clearing out large numbers of locally downloaded files.

Alternative Methods for Deleting

Music

• Using a music app with delete features (for third-party music): **Some apps provide more targeted deletion methods for imported music.**

Case Study: iCloud Storage Issues and Deletion

Scenario: A user with a large iCloud Music Library finds their iPhone storage running low. Solution: **Identify which tracks can be removed or streamed and then selectively delete downloaded, unused, or less important tracks from the library.** Outcome: **Freed up significant storage space, allowing for more efficient use of the device.**

Troubleshooting Common Issues

• Songs won't delete: *Check if the song is locked, if it's associated with a purchased album or an iCloud playlist. Try restarting the Music app.* • Deletion errors: Ensure sufficient storage capacity. Issues may also arise if the device or iCloud connection has a problem.

Data Visualization: Storage Space Usage

(A hypothetical chart showing storage space before and after deleting a significant number of songs). The chart should visually demonstrate the improved storage space.

Feeling your iPhone's storage groaning under the weight of forgotten melodies or that one song you've suddenly grown to dislike? You're not alone! Managing your music library on your iPhone is a common task, and thankfully, it's not as complicated as it might seem. Whether you're trying to free up space, declutter your library, or simply remove tunes that no longer spark joy, this comprehensive guide will walk you through every method to **delete songs from iPhone**. We'll cover everything from quick single-song deletions to managing entire albums and playlists, and even touch upon how to tackle music downloaded from streaming services. So, grab your iPhone, and let's get your music library in tip-top shape!

Why Delete Songs from Your iPhone?

Before we dive into the "how," let's quickly touch upon the "why." There are several compelling reasons to regularly prune your iPhone's music collection:

1. **Free Up Storage Space:** This is usually the primary driver. Songs, especially in high quality, can consume a significant chunk of your iPhone's storage. Deleting unused tracks is one of the fastest ways to reclaim valuable gigabytes.

2. **Declutter Your Library:** Over time, your music library can become a chaotic jumble of songs you rarely listen to. Deleting them makes it easier to find the music you actually love.
3. **Remove Unwanted Tracks:** We all have those songs that, for whatever reason, we just don't want to hear anymore. Whether it's a phase passed or a disliked artist, deletion is the answer.
4. **Organize Playlists:** If you're meticulous about your playlists, deleting songs that no longer fit the vibe is essential for maintaining their intended flow.

Deleting Songs Directly from the Music App (Most Common Method)

This is the most straightforward and frequently used method for removing individual songs, albums, or even entire artists directly from your iPhone's built-in Music app.

Deleting a Single Song

Got that one track that's become an earworm in the worst way? Here's how to banish it:

1. **Open the Music App:** Locate and tap on the Music app icon (it looks like a colorful musical note).
2. **Navigate to Your Library:** Tap on the "Library" tab at the bottom of the screen.
3. **Find the Song:** You can browse by "Songs," "Artists," "Albums," or "Playlists" to locate the track you want to delete. For a direct song search, tap on "Songs."
4. **Initiate Deletion:**
    1. **Method A (Swipe to Delete):** Once you've found the song,

swipe left on it. You'll see a red "Delete" button appear. Tap it.
2. **Method B (Tap and Hold):** Alternatively, you can **tap and hold** on the song. A menu will pop up. Select "Delete from Library."

This action will permanently remove the song from your iPhone's local storage and your Apple Music library (if it was synced).

Deleting an Entire Album

If an entire album has fallen out of favor, you can delete it in one fell swoop.

1. **Open the Music App** and go to your **Library.**
2. Tap on **"Albums"** to view your collection.
3. **Find the Album:** Locate the album you wish to delete.
4. **Tap on the Album Cover:** This will open the album view, showing all the tracks within it.
5. **Tap the Three Dots (...) or "Edit":**
    1. On newer iOS versions, you'll typically see three horizontal dots (...) at the top of the album view. Tap this.
    2. On older versions, you might see an "Edit" button.
6. Select **"Delete from Library."**
7. **Confirm:** You'll be prompted to confirm your action. Tap **"Delete Album"** or **"Delete from Library"** again.

This will remove all songs from that album from your iPhone.

Deleting an Artist

Feeling less enthusiastic about an entire artist? You can remove all their songs at once.

1. **Open the Music App** and navigate to your **Library.**

2. Tap on **"Artists"** to see a list of everyone you're following or have music from.
3. **Find the Artist:** Locate the artist whose music you want to remove.
4. **Tap on the Artist's Name:** This will display all their albums and songs.
5. **Tap the Three Dots (...) or "Edit":** Similar to deleting an album, look for the three dots (...) or an "Edit" button at the top of the artist's page.
6. Select **"Delete from Library."**
7. **Confirm:** Confirm the deletion when prompted.

This will remove all songs and albums by that artist from your iPhone's local storage.

Deleting Songs from Playlists

Playlists are dynamic, and sometimes a song just doesn't fit anymore. Here's how to remove it from a specific playlist without affecting its presence in your main library.

1. **Open the Music App** and go to the **"Library"** tab.
2. Tap on **"Playlists."**
3. **Select the Playlist:** Choose the playlist that contains the song you want to remove.
4. **Find the Song:** Scroll through the playlist to find the track.
5. **Swipe to Delete:** Just like deleting a single song from your library, **swipe left** on the song within the playlist. Tap the red **"Delete"** button.

Important Note: Deleting a song from a playlist *only* removes it from that specific playlist. The song will still remain in your main Music library unless you explicitly delete it from there as well.

Managing Downloaded Music from Apple Music

If you're an Apple Music subscriber, you likely download songs, albums, and playlists for offline listening. These downloads also take up space.

Deleting Downloaded Songs/Albums/Playlists

1. **Open the Music App** and go to your **Library.**
2. **Locate the Downloaded Content:** Find the song, album, or playlist you've downloaded. You'll often see a small download icon (a cloud with a downward arrow) next to items not downloaded, and a checkmark inside a circle next to downloaded items.
3. **Tap the Three Dots (...) or "Edit":**
    1. For a single song or album, tap the three dots (...) next to it or within its view.
    2. For a downloaded playlist, tap the three dots (...) at the top of the playlist view.
4. Select **"Remove Download."**
5. **Confirm:** If prompted, confirm that you want to remove the download.

This action removes the offline copy from your iPhone, but the song will still be available in your Apple Music library to stream or download again later.

Deleting All Downloaded Music at Once

Want to clear out all your offline music?

1. Go to **Settings** on your iPhone.
2. Scroll down and tap on **"Music."**
3. Under the "Downloads" section, you'll see an option to **"Edit."** Tap it.
4. Tap the red minus icon (-) next to "Downloaded Music."
5. Tap **"Delete"** and then **"Done"** to confirm.

This is a quick way to free up a lot of space if you've downloaded a substantial amount of music.

Deleting Music Synced from a Computer (Older Method, Still Relevant for Some)

If you're still using an older method of syncing music to your iPhone from a computer using iTunes (or Finder on newer Macs), the deletion process is slightly different.

If You Sync Music via USB Cable

1. **Connect your iPhone to your computer.**
2. **Open iTunes (or Finder).**
3. **Select your iPhone** when it appears in iTunes/Finder.
4. Navigate to the **"Music"** tab.
5. You'll typically have options to sync "Entire music library" or "Selected artists, albums, genres, and playlists."

6. **To delete:**
    1. If you sync your entire library, you'll need to remove the songs from your computer's music library first, then re-sync your iPhone.
    2. If you sync selected items, simply **uncheck the boxes** next to the songs, albums, or artists you want to delete from your iPhone.
7. Click **"Apply"** or **"Sync"** to implement the changes.

This method requires you to manage your music library on your computer.

Troubleshooting: "Can't Delete Song from iPhone"

Occasionally, you might encounter issues when trying to delete songs. Here are a few common scenarios and solutions:

1. Protected Content

If you purchased music from the iTunes Store *before* the era of Apple Music and iCloud Music Library, some older purchases might be protected. In most cases, these can still be deleted directly from your device. If you're having trouble, ensure you're logged into the Apple ID that made the purchase.

2. Songs Synced from a Computer

As mentioned above, if songs were synced from a computer, you generally cannot delete them directly from the iPhone. You need to disconnect them through the sync settings on your computer.

3. Apple Music Subscription Issues

If you're trying to delete songs downloaded from Apple Music and are having trouble, ensure your subscription is active. Sometimes, glitches can occur. Signing out of your Apple ID and signing back in within the Music app can sometimes resolve these issues.

4. Restricted Access (Parental Controls)

If parental controls are set up on your iPhone, they might restrict the ability to delete content. Check your Screen Time settings under "Content & Privacy Restrictions" > "Content Restrictions" > "Music, Podcasts & News" to ensure deletion isn't blocked.

5. Software Glitches

Rarely, a temporary software glitch can prevent deletion. Try restarting your iPhone. A force restart might be necessary in some stubborn cases.

Reclaiming Space: Tips for Efficient Music Management

* **Regularly Audit Your Library:** Make it a habit to go through your music library every few months. Delete songs you haven't listened to in ages. * **Utilize "Manage Storage": Go to **Settings > General > iPhone Storage.** Scroll down to the "Music" app. Here you can see how much space your music is taking up and even get suggestions for deleting recently added music or by artist. * **Be Mindful of Downloads:** If you have limited storage, be selective

about what you download for offline listening from Apple Music. * **Consider Streaming:** For music you listen to occasionally but don't need offline, consider just streaming it from Apple Music or other services instead of downloading.

Conclusion

Deleting songs from your iPhone is a fundamental aspect of managing your device's storage and curating your personal soundtrack. Whether you're tidying up your library, making space for new memories, or simply removing a tune that’s overstayed its welcome, the methods outlined in this guide should have you covered. Remember, the easiest way for most users to **delete songs from iPhone** is through the Music app itself, with swiping left or using the "..." menu offering quick access. For those using synced music, the computer remains the control center. By following these steps, you can ensure your iPhone's music library is always a pleasure to navigate, filled only with the melodies that truly resonate with you. Happy listening, and happy deleting!

Deleting songs from your iPhone is a straightforward task that helps maintain a clean, efficient music library tailored precisely to your preferences. In today’s digital age, managing large collections efficiently is essential—whether you’re curating playlists, decluttering storage, or simply organizing your favorite tracks. Understanding how to remove songs directly from your device empowers you to take full control over your audio experience.

Deleting a song on an iPhone can be accomplished through multiple intuitive methods, each suited to different user needs and levels of technical comfort. The simplest approach involves using the built-in Music app, where songs are automatically linked to albums, artists, or playlists. To remove a track, locate it within the

app’s library, tap the three-dot menu or the “Remove” option—depending on your iOS version—and confirm the deletion. This action permanently removes the file from your device, freeing up valuable storage space without affecting your broader music catalog, as long as the album or artist remains intact. For users managing extensive libraries, navigating through albums to delete individual songs ensures precision and prevents accidental removal of related tracks.

Another effective method leverages iTunes or Finder (on macOS Catalina and later) by syncing your iPhone’s music content. When you sync via iTunes, you can choose to delete specific songs directly from the desktop application, which then reflects changes on your device. Alternatively, using the Finder on macOS allows for more granular control—simply connect your iPhone, browse your music folder, select individual files, and delete them. This desktop-based approach is ideal for those who prefer managing music outside the iPhone or require batch deletion capabilities.

The benefits of regularly removing unwanted songs extend beyond mere storage optimization. A decluttered library enhances app performance, reduces clutter in playlists, and ensures your device remains responsive and fast. Moreover, deleting songs can support privacy by eliminating traceable media files, especially important when repurposing or gifting your device. For music enthusiasts, maintaining a streamlined collection fosters better focus, enabling quicker access to high-priority tracks and improving overall enjoyment.

Looking ahead, the integration of artificial intelligence and smarter music organization tools promises even greater simplicity. Future iterations of iOS may introduce automated curation features that suggest deletions based on usage patterns, genre preferences, or storage constraints. These advancements could make song removal not just easier, but more intelligent—anticipating your needs and

helping maintain a lean, personalized music experience with minimal effort. As digital audio continues to evolve, mastering basic management tasks like song deletion remains a vital skill, ensuring your iPhone remains a reliable, efficient companion for all your musical moments.

Keeping your iPhone’s storage tidy is crucial for optimal performance and ensuring you have space for new memories, apps, and, of course, more music. One of the most common culprits for filling up an iPhone’s internal memory is a burgeoning music library. Whether you’ve accumulated songs over years, downloaded them through various streaming services, or acquired them through less conventional means, learning **how to delete songs from iPhone** is an essential digital housekeeping skill. This comprehensive guide will walk you through the most effective methods, from the simplest swipe-to-delete to more advanced techniques for managing your entire music collection.

Why Delete Songs from Your iPhone?

Before diving into the "how," let’s briefly touch on the "why." A cluttered iPhone can lead to several issues:

1. **Storage Space:** This is the most obvious reason. iPhones, especially older models, have limited storage. Deleting unnecessary songs frees up valuable gigabytes for photos, videos, apps, and system updates.
2. **Performance:** While less direct, a full storage drive can sometimes impact your iPhone’s overall speed and responsiveness.

3. **Organization:** A streamlined music library is easier to navigate and enjoy. Remove duplicates or songs you no longer listen to for a cleaner experience.
4. **Subscription Management:** If you use music streaming services, understanding how to manage downloaded songs is key to avoiding unnecessary data usage and storage consumption.

Method 1: Deleting Songs Directly from the Music App (Downloaded Songs)

This is the most straightforward method for removing music that you've downloaded for offline playback. This applies to songs added from your computer via syncing or those downloaded from Apple Music.

Deleting Individual Songs

If you want to remove just a few tracks, follow these steps:

1. Open the **Music app** on your iPhone.
2. Tap on the **Library** tab at the bottom.
3. Select how you want to browse your music (e.g., Songs, Artists, Albums, Downloaded). For downloaded music, choosing **Downloaded** is the most efficient.
4. Find the song you wish to delete.
5. **Tap and hold** on the song. A context menu will appear.
6. Select **Delete from Library**.
7. Confirm your choice by tapping **Delete from Library** again.

Note: If you see a download icon next to the song, it means it's not

currently downloaded to your device and thus not taking up storage. The "Delete from Library" option here will remove it from your Apple Music library, but not free up space if it was never downloaded.

Deleting Entire Albums or Artists

To clear out larger chunks of your music library, you can delete entire albums or by artist:

1. Navigate to **Library** in the Music app.
2. Tap on **Albums** or **Artists**.
3. Find the album or artist you want to remove.
4. **Tap and hold** on the album or artist artwork/name.
5. Select **Delete from Library**.
6. Confirm by tapping **Delete from Library**.

This is an excellent way to quickly declutter your downloaded music if you’re switching genres or have old playlists you no longer need.

Method 2: Deleting Songs via Settings (Downloaded Music and Apple Music)

The iPhone's Settings app provides a comprehensive overview of your storage usage, including music. This method is particularly useful for seeing how much space your music library is consuming and for bulk deletions.

Using Storage Settings to Manage Music

This method is perfect for identifying and deleting large portions of your downloaded music, including songs from Apple Music and any other downloaded content within the Music app.

1. Open the **Settings** app.
2. Tap on **General**.
3. Tap on **iPhone Storage**.
4. Wait for your apps to load. Scroll down and tap on **Music**.
5. Here, you'll see a breakdown of your music storage. At the top, you'll likely see options for "All Music" or "Downloaded Music."
6. To delete all downloaded music, tap on **Edit** in the top right corner.
7. Tap the red minus icon next to "All Music" (or similar wording).
8. Tap **Delete** to confirm.

This action will remove all music files that are currently downloaded to your iPhone, freeing up significant space. Your music library within Apple Music will remain intact, and you can re-download songs as needed.

Deleting Songs by Artist or Album within Settings

For more granular control within the Music storage settings:

1. Follow steps 1-5 above to navigate to **Settings > General > iPhone Storage > Music**.
2. Instead of deleting "All Music," scroll down to see a list of your artists and albums, sorted by size.
3. Tap on the artist or album you wish to remove.

4. You'll see an **Edit** button in the top right corner. Tap it.
5. Tap the red minus icon next to each song you want to delete.
6. Tap **Delete** for each song, or if you're removing the entire album, you might have an option to delete the whole album at once.

This offers a precise way to target specific tracks or collections without affecting your entire library.

Method 3: Managing Downloads from Streaming Services

If you use music streaming services like Spotify, Amazon Music, or others that allow offline downloads, you'll need to manage those downloads separately. These services typically have their own in-app methods for deleting downloaded songs.

Spotify

1. Open the **Spotify app**.
2. Go to **Your Library**.
3. Navigate to **Playlists**, **Albums**, or **Downloaded**.
4. For playlists, albums, or songs you've downloaded, tap the **three dots (...)** next to the item.
5. Select **Remove Downloads** (for playlists/albums) or **Delete Song** (for individual songs).

Amazon Music

1. Open the **Amazon Music app**.
2. Tap on **Library**.
3. Select **Songs**, **Albums**, or **Playlists**.

4. Tap the **three dots (...)** next to the song, album, or playlist you want to remove downloads from.
5. Select **Remove from Downloads** or **Delete Song**.

Other Streaming Services

The general principle for most streaming services is to find the downloaded content within the app and look for an option to "remove downloads" or "delete song" via a context menu (usually represented by three dots or a gear icon).

Crucially, deleting downloaded songs from a streaming service will remove them from your device's storage, but they will remain in your streaming account and can be re-downloaded at any time as long as you have an active subscription.

Method 4: Deleting Songs Synced from a Computer (Older iTunes Method)

If you’re still using older methods of syncing music from a computer to your iPhone via iTunes (or the Finder on newer macOS versions), the deletion process is primarily managed on your computer.

Using iTunes/Finder for Syncing

Here’s how to manage songs synced from a computer:

1. Connect your iPhone to your computer.
2. Open **iTunes** (on Windows or older macOS) or **Finder** (on macOS Catalina and later).

3. Select your iPhone when it appears in the sidebar or device list.
4. Navigate to the **Music** tab.
5. You'll see options like "Sync Music."
6. To remove all synced music, uncheck the box next to "Sync Music." Then, click **Apply** or **Sync**.
7. To remove specific songs, albums, or artists, choose "Selected playlists, artists, albums, and genres" under "Sync Music." Then, uncheck the specific items you want to remove from your iPhone. Click **Apply** or **Sync**.

Any songs deleted this way are removed from your iPhone but remain in your computer's music library. You'll need to manage your computer's library separately.

Tips for Efficient Music Management and Storage Optimization

Beyond just deleting, consider these strategies to keep your iPhone’s music storage in check:

1. **Regularly Review Downloaded Music:** Make it a habit to check your downloaded music periodically, especially if you frequently download playlists or albums for offline listening.
2. **Utilize Streaming Services Wisely:** If you primarily listen to music via streaming, be mindful of what you download for offline playback. Download only what you truly need for periods without internet access.
3. **Disable Automatic Downloads:** Ensure that automatic music downloads are turned off in your streaming app settings to prevent unwanted files from cluttering your storage.
4. **Check for Duplicates:** Sometimes, syncing issues can lead to

duplicate songs. While the iPhone’s Music app doesn't have a built-in duplicate finder, you might find third-party apps or computer-based solutions that can help identify and remove them.

5. **Consider iCloud Music Library:** If you’re an Apple Music subscriber, the iCloud Music Library feature syncs your music across all your devices. While it doesn’t directly save storage on your iPhone for streamed tracks, it ensures your library is accessible without needing to download everything. However, be aware that downloaded songs for offline listening still consume space.
6. **Explore Third-Party Apps with Caution:** While some third-party apps claim to help manage and delete music, be cautious. Stick to Apple’s built-in methods and reputable streaming service apps for the safest and most effective results. Always read reviews and understand what permissions an app requires before installing.

Troubleshooting Common Issues

Occasionally, you might encounter issues when trying to delete songs:

1. **Songs Won’t Delete:** If a song is tied to a subscription service and you’re not logged in or your subscription has expired, you might have trouble deleting it directly. Try managing it within the specific app or via Settings > iPhone Storage > Music.
2. **"Delete from Library" Option Missing:** This usually means the song isn’t a downloaded file taking up space. It might be a song you’ve added to your Apple Music library from the streaming catalog that you haven’t downloaded for offline listening.
3. **Syncing Issues with Computer:** If songs you deleted on your

computer reappear on your iPhone, ensure you've properly synced after making the deletions. Sometimes a full sync or even a restart of both devices can resolve this.

Conclusion

Learning **how to delete songs from iPhone** is a fundamental skill for any iPhone user who enjoys their music library. By understanding the different methods available – from the quick swipe in the Music app, to the comprehensive storage management in Settings, to the specific procedures for streaming services and computer syncing – you can effectively manage your device's storage. Regularly decluttering your music collection ensures your iPhone runs smoothly, remains organized, and always has space for your favorite tunes and essential apps. Take a few minutes each month to review your music library, and you'll enjoy a much more optimized and pleasant iPhone experience.

3	What's the difference between deleting and removing downloads from Apple Music?	Deleting a song from your library permanently removes it. Removing a download from Apple Music means it will no longer be available offline on your device, but it will remain in your Apple Music library if you choose to download it again later.
4	How do I free up space by deleting songs I've purchased from iTunes?	Go to the Music app, tap 'Library', then 'Songs'. Tap 'Edit' and select the songs you purchased from iTunes that you no longer want. Then, tap 'Delete'.
5	Can I delete songs directly from the iPhone's Settings app?	Yes, you can. Go to 'Settings' > 'General' > 'iPhone Storage'. Scroll down to 'Music', tap it, and then you can tap 'Edit' to remove songs or albums, or swipe left on individual songs to delete them.
6	How do I remove songs from a specific playlist on my iPhone?	Open the Music app, navigate to the playlist you want to edit. Tap 'Edit' in the top right corner, then tap the red minus icon next to the songs you want to remove from that playlist. Finally, tap 'Delete'.

7	Will deleting songs from my iPhone also delete them from my computer's iTunes/Music library?	If your iPhone is synced with your computer, deleting songs directly on the iPhone may not remove them from your computer's library. To ensure they are removed everywhere, you might need to manage them through your computer's iTunes or Music app and re-sync.
8	I'm running out of storage. What's the easiest way to delete songs I don't listen to?	The 'iPhone Storage' section in Settings is very helpful. Go to 'Settings' > 'General' > 'iPhone Storage' > 'Music'. It shows you which artists/albums are taking up the most space, and you can easily delete them from there.
9	How do I remove downloaded podcasts that are taking up space, similar to deleting songs?	While the process is for podcasts, you can do it similarly in the Podcasts app. Go to your Library, tap 'Downloaded', and then you can swipe left on individual episodes to delete them, or find an 'Edit' option for batch deletion.
10	Is there a way to 'unstall' songs I've downloaded for offline listening?	In the Music app, under 'Library' > 'Downloaded', you can usually tap 'Edit' and then there might be an 'Unsubscribe' or 'Remove All' option, or you'll have to manually remove them via the minus icons. Check the top right for an 'Edit' button.
